

Finnagin Wantland

fwantland50@gmail.com - Las Vegas, Nevada - finnwant.github.io

EDUCATION

University of Las Vegas, Nevada,
Bachelor of Science, Computer Science
Dean's List:

Exp Grad Date: May 2027
GPA: 3.27
Spring 2024

SKILLS

Frameworks: Unity, Godot, React, Git, Microsoft Office, Adobe Photoshop, MATLAB, QT
Programming Languages: C++, C, C#, Python, HTML, CSS

RELEVANT COURSEWORK

Design and Analysis of Algorithms: Analysis of the time and space complexity of algorithms. Techniques for efficient algorithm design and the effect of structure choice on efficiency

Programming Languages: Design, evaluation and implementation of programming languages. Includes data types and data abstraction, sequence control and procedural abstraction, parameter passing techniques, and scope rules.

Data Structures and Algorithms: Problem-solving methods and algorithm development in a high-level programming language. Program design, coding, debugging, and documentation using techniques of good programming style

PROFESSIONAL EXPERIENCE

Coding Coach

The Coder School

December 2025 - Present

- Mentor on average ~12 young coders a week through hands-on projects and personalized instructions, creating games
- Teach OOP practices for game development in current frameworks such as Unity, Godot, RPG maker, etc.
- Turn ideas into working apps and games while helping students build confidence in STEM

Data Collector and Curator

Freelance work

September 2024

- Curated frameworks, insights, and strategies for an entrepreneurial audience based on the My First Million Podcast for MFMVault.com
- Handled and labeled speakers for over 600 episodes of My First Million Podcast for MFMVault.com
- Managed and filled in data for over 200 guest profiles for MFMVault.com

PROJECTS

Personal website and portfolio: <https://FinnWant.github.io>,

- built using purely HTML and CSS with a built in visit counter using CounterAPI

Football Simulator:

- A simple console-based game in C++ that lets you make custom teams or players and create the football team
- Uses base player class as parent for all position classes to inherit from, this allows for polymorphic behavior at runtime
- Players are dynamically casted to position using shared pointers to get stats and ratings for in-game events
- Uses JSON for data persistence and coded with OOP principles in mind

Warhammer Table Top Army Builder:

- QT based web application that lets you build and create armies for the tabletop war game Warhammer 40k
- Choose different abilities and weapons for units and see army stats and points in real time
- Soon to be added forms to share army builds and discuss Warhammer 40K related topics
- Uses QT 6 for the ui and JSON for file persistence to save army/unit data

Pokemon Pond Simulator:

- a virtual ecosystem where fish and plants interact in a dynamic environment
- Modeling the behavior and survival of organisms through a 2D grid. Fish swim around and consume plants to sustain themselves, while plants grow with water and sunlight, only losing mass when they're nibbled on by the fish
- Relies on inheritance for all the creature and plant types allowing for polymorphic behavior at runtime via virtual functions
- Built completely using C++

ORGANIZATIONS

- Member of the National Society of Leadership and Success
